DINO SAUR TALES

Students bring Currington's 'magmasaur' story to life

A few years ago scientists made a fantastic discovery. When exploring deep into the bowels of the earth's mantle, a creature was found, swimming amongst the magma, and thus, the magmasaur was born.

Or at least, that's what Coach David Currington told his world geography class a few short years ago.

"They bought it," he said.

Ever since, the legend has inspired some of his students to draw renditions of the beast that now line a wall of his classroom.

"I'll just keep adding to it as long as I'm here," Currington said.

Though he says such a being exists, what it looks like has been speculated by some of his top artists.

Whether it be a Tyrannosaurus knock-off or a fish like monster, the magmasaur takes many forms.

"I think it'd be flatter." Currington said. "It'd have to be to deal with that much pressure."
